Preface

A This is a website for the work-in-progress PhD thesis of mine. It is **not** intended to be read by anyone except me (and maybe few other people) yet. If you do flick through it anyway, consider yourself warned. It might be messy at some places and will definitely undergo serious rewriting.

This work can be read online at https://petrpajdla.github.io/dataInfrastructures/. The source repository is on GitHub at https://github.com/petrpajdla/ dataInfrastructures/.

This document is created in an open-source Quarto scientific and technical publishing system. You might be asking why is it published and written like this even if it is not intended for any audiences except myself yet. I have no answer to this. One evening I simply decided to give Quarto publishing a try and set this whole thing up in less then an hour or so.

Notes on writing

This note is written mostly for a future me, in case I need to set up the working environment again on a different machine and to serve as a memo if I forget how to continue.

As of November 2022, this is written on Archlabs GNU/Linux machine, mostly in Visual Studio Code editor and sometimes in RStudio. Changes are trackeg with Git and a remote repository is on GitHub (see the note above), same as the rendered website. The rendered version of the manuscript is in the branch gh-pages. See a guide on how to set this up here. The online version is published with this command:

Terminal

quarto publish gh-pages

In my point of view, there are numerous advantages to scientific writing in this manner over traditional Office-based approach. A non-exhaustive list of why to do scientific writing this way is below.

• Plain text

Writing in plain text enhanced with a simple *Markdown* syntax and some *Quarto* elements is great because from one source document, a .pdf, .html, .docx (and probably more) document formats can be rendered using pandoc.

• Version control

Tracking changes using git is easily implemented when writing in a plain text. Keeping track of any changes in the manuscript is obviously crucial for any later revisions etc.

• Simple citation management

Bibliography is organized using Zotero with Better BibTeX extension which is used to export (and keep updated) necessary collections in a parent folder of the manuscript as .bib files. My Zotero library is here. To format the citations, a citation style of the Journal of Computer Applications in Archaeology is used (.csl file was obtained here).

• Embedded code

Code blocks (and the associated results) can be easily embedded in the text. My language of choice is R. For more information on reproducibility see Marwick (2017) and Marwick, Boettiger and Mullen (2018).

Introduction

This is a book created from markdown and executable code.

See Zhang, Zhao and Ventrella (2018) for additional discussion of literate programming.

1 Theory and Method

1.1 Archaeology as theory- and/or data-driven science

(based on TAG Brno 2021 talk)

1.2 Theorizing data

Defining archaeological data, micro- to macro-scales;

1.3 Methodological Approaches

Review of current approaches: Spatial and/or Landscape archaeology, Macroarchaeology, Big data archaeology etc.

2 Data

Sources of (archaeology) data in the Czech Republic, an overview:

Data models, datafication of past reality, simple vs complex data models; Assessing findability, accessibility, interoperability, and reusability (FAIR) principles; Cultural heritage management data vs research data domains; Archaeological information system of the Czech Republic (AIS CR) as the main data infrastructure.

3 Discussion

4 Summary

In summary, this book has no content whatsoever.
